Updated: 5/10/12

The Change Printer plug-in gives FileMaker® Pro the power to automatically change printers, set optional printing attributes, coordinate large and complex print procedures and switch between various types of printers/drivers such as: inkjet, laser, label, and PDF. By using the Change Printer plug-in your users can save time and frustration by not having to search for particular printers based on what they are printing.

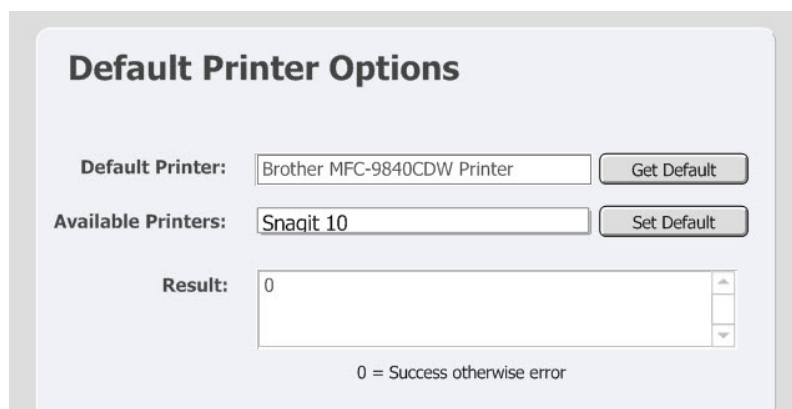

Printers:

- Automatically switch printers with or without user interaction
- Gather all the printers connected to the user's computer and store them in FileMaker for future reference.
- Get or set the system default printer.

Printing Attributes:

- Determine how long the print dialog will be displayed.
- Determine the number of copies the job will print.
- Determine the source tray the paper will come from on the printer.
- Determine the portrait or landscape orientation. (Windows feature only)

Default Printer Options
