5 Users.	\$449.78
10 Users.	\$719.64
25 Users.	\$1,619.19

System Requirements:

(System requirements are subject to change with out notice. Please consult the web site for the latest information.)

- Mac OS X v.10.7 "Lion"
- FileMaker® Pro 8 through 12
- Microsoft® Outlook for Mac 2011 (updated to the latest version)

Updated: 5/10/12

The Outlook Manipulator for Mac plug-in allows FileMaker® Pro to exchange data with Microsoft® Outlook Contacts, Mail, Calendar, Tasks, and Notes within Exchange and IMAP e-mail accounts. By using this plug-in your users can become more efficient through the elimination of double entry. As information gets entered into your FileMaker database during the day your users' Outlook folders are updated. This allows your users the ability to synchronize with their mobile devices such as iPhone, Droid, or Blackberry.

E-mail:

Use the plug-in to import and parse e-mails from Outlook into FileMaker. Once all e-mails are in FileMaker, then you can have a complete archive of all e-mail correspondence in FileMaker allowing the entire company to view the e-mail history between any customer and employee. You can also send HTML or plain text formatted e-mails with multiple attachments from FileMaker.

Contacts:

Centralize your entire company's contact list by using this powerful plug-in to pull Outlook contacts from each user into FileMaker. Once all your contacts are centralized in FileMaker, then you can push all records from FileMaker to Outlook allowing each user to update Outlook contacts.

Calendars:

Use the plug-in to push your FileMaker events into Outlook. Once the events are in Outlook you can sync your mobile device such as iPhone or Blackberry with Outlook allowing you to have your FileMaker data in your mobile device. You can also pull events from Outlook into FileMaker as the plug-in allows a bi-directional data exchange allowing you to update or create appointments either in Outlook or FileMaker.

Tasks & Notes:

Use the plug-in to perform a bi-directional data exchange and either push your tasks and notes from your FileMaker database into Outlook, or pull them from Outlook into FileMaker. Once your tasks and notes are in Outlook, then you can sync your mobile device with Outlook allowing you to have your FileMaker data in your mobile device.

Additional Features:

- Display Outlook records from the FileMaker interface
- Save messages as .EML files
- Take advantage of Outlook pop-up reminders
