

Expand Your Skillset With FileMaker Development & Integration Training

Program Overview

This 6 to 8 week program is designed for user's who have mastered the basics, and are ready for intermediate techniques.

Get hands on development experience making changes based on written requirements. Move onto learning how to utilize BaseElements (a developer tool) to improve legacy solutions performance and adaptability. Development best practices and file size management.

You'll also develop proficiency with using and integrating plug-ins. Learn the "rules of the road" for JSON and how it plays a part in API Fundamentals.

To wrap up the intermediate program you will build a solution from scratch based on written requirements to solidify what you have learned.

What's Included:

- Intermediate development assignments
- Optimizing FileMaker solutions using BaseElements for performance improvements.
- Connecting FileMaker with external data sources using plug-ins, and FileMaker Data API and 3rd party application APIs.
- Building automated business apps with invoicing and payment processes
- Weekly mentoring sessions with a certified FileMaker developer.
- Progress monitoring to ensure students are progressing on schedule.

Evaluation & Certification:

- Evaluated development assignments
- Exam on course and lessons
- Claris FileMaker Pro Specialist Badge
- Upon successful completion:
 - A certificate of program completion
 - An evaluation certification.
 - *If students do not pass the first time, they will have another chance to take the evaluation.*
